## Selective Broadleaf Weed Control

### Product Overview

- FAIRWAY herbicide is a broadleaf herbicide containing 280 g/L MCPA, 140 g/L Bromoxynil and 40 g/L Dicamba
- It is registered for the control of dicot weeds in a wide range of recreational turf situations
- FAIRWAY Herbicide can be used on a large number of established turf varieties, including Common Couch, Qld Blue Couch, Kikuyu, Paspalum, Fescue, Bentgrass and Ryegrass
- A key feature of FAIRWAY Herbicide is that it provides quick weed knockdown as well as being one of the broadest spectrum broadleaf weed herbicides available on the market, registered to control 11 weeds
- FAIRWAY herbicide contains a dual mode of action for improved performance and resistance management.

### Mode of Action

GROUP **C** HERBICIDE

Bromoxynil, one of the active ingredients in FAIRWAY is a fast-acting nitrile herbicide (Group C) that works on contact by inhibiting photosynthesis in target plants. The compound is readily absorbed into leaves with little to no downward movement to other plant parts. Susceptible weeds quickly die from the build up of molecules that destroy cell membranes.

The other 2 active ingredients in Fairway is MCPA and Dicamba (Group I). These active ingredients are hormone-type selective herbicides in the phenoxy category. MCPA & Dicamba provide systemic activity through leaf and root absorption.

They upset the normal hormone balance within the plant. Auxin mimic herbicides cause unregulated plant growth, resulting in symptoms on susceptible plants that include growth and reproduction abnormalities (especially on new growth). Broadleaf weed species exhibit stem and petiole twisting (epinasty), leaf malformations, parallel venation, crinkling, leaf strapping, stem callus formation, and stunted root growth. Plant death is gradual, due to unconstrained mobilization of reserves, however generally symptoms are observed within 7- 14 days following application.

### Use Rates

FAIRWAY Herbicide is applied at a rate of 5 L/ha (50 mL/100 m<sup>2</sup>). To enhance movement of the active ingredients into the plant, it is recommended that FAIRWAY Herbicide be mixed with Raizer 700 surfactant at the rate of 250 – 500 mL/100 L of water. For optimum results it is best to apply to actively growing weeds. Ideally, do not mow the turf for 2 days prior to and following the application. Fertilisation should be avoided following application for a period of 2 weeks. In warm conditions (temperatures over 30 degrees) application of FAIRWAY Herbicide may cause browning of turf, particularly to *Paspalum* species.

### Pack Size

Fairway Herbicide comes in a 10 L pack size to better allow for ease of handling in storage and spray tank mixing operations.

## Features and Benefits

Features	Benefits
Dual modes of action, Group C & I	More effective performance. Resistance management benefits
Broadest Spectrum Weed Control	Will get the job done on most broadleaf weed species
Quick Knockdown. Kills weed in 7-14 days	Visible results within a shorter period of time. Newer products can take longer to work
Effective on both immature and mature weeds	Controls broadleaf weeds at most stages of development
Controls tough broadleaf weeds such as Capeweed, Creeping Oxalis and Fleabane	Can effectively be used to target the toughest weeds in your turf management situation
Can be used over a range of warm and cool season turf species	Safe on most key turf types on the market
10 L pack size.	Better complies with manual handling requirements. Easier to use in spray tank mixing operations.
