

Simplot AgriBusiness Specialty Operations

Nurseries require a variety of unique formulations to meet their specific growing needs. You need long-lasting, controlled-release fertilizers that reduce labor costs and offer the ultimate level of application safety. With APEX® fertilizers, you get what you need in plant nutrients and nutrition throughout the entire growing season in any growing condition. Running a nursery operation can be unpredictable, your fertilizer shouldn't be.

BEST® manufactures and markets a wide variety of turf products including general turf fertilizers, controlled-release fertilizers, fertilizers for tees and greens, organic fertilizers and herbicide combinations. Professional turf managers count on the consistent performance of BEST® fertilizers, from the uniform distribution of our homogeneous N-P-K pellets to the top controlled-release technologies like GAL-Xe^{ONE} and UMAXX®.

Simplot Partners, a product distribution channel of the J. R. Simplot Company, offers a complete line of specialty pest management, plant nutrients, and maintenance products from eight locations in the western United States and three locations in Australia. Simplot Partners also features its own proprietary line of premium quality turf colorants, spray adjuvants, soil surfactants, and many other turf and ornamental plant management products.

We provide professional products and agronomic solutions to golf course superintendents, landscapers, nursery operators, managers of municipal properties, athletic field managers and agronomists of every kind through our extensive experience and product knowledge.

The J. R. Simplot Company offers a host of liquid and dry industrial products plus high-quality silica sand to meet the demands of a variety of industries. Simplot goes out of its way to not only offer high-quality industrial products, but also to offer you outstanding customer service and on-time delivery. Your business matters to us.

Simplot's industrial products are derived from some of the highest grade ores in the world and are then converted to finished products in state-of-the-art facilities in California, Idaho and Wyoming. From these facilities, we distribute to our customers across North America.

Consistent physical and chemical characteristics. High biological availability. The lowest heavy metal profile in the industry.

The J. R. Simplot Company sells Simphos® because it contains the best feed phosphate ingredients available. It all starts with the phosphate rock from our mine in Vernal, Utah. The phosphoric acid produced from this rock is combined with a premium white limestone to create finished feed phosphates, which are important nutritional supplements for livestock and poultry.

As the only producer in the West, our location offers you faster delivery and lower freight costs, regardless of where you are located.

As leaders in turfgrass research, breeding and production, Jacklin® Seed offers the expertise and innovation that golf courses and sod farms value.

Jacklin® Seed offers a full product line of turfgrass varieties including Kentucky bluegrass, perennial ryegrass, creeping bentgrass tall and fine fescue, zoysiagrass, bermuda and other specialty grasses. We have knowledgeable distributors around the world and expert agronomists on staff with experience in seeding everything from prominent golf courses and professional athletic fields to native wildlife areas.
