

# TRICHO-FLOW<sup>plus</sup>™

TURF

Trichoflow Turf Plus is a cost-effective biological inoculant treatment developed for your valuable fine sports turf. Trichoflow Turf Plus contains proprietary strains of the beneficial fungus *Trichoderma*, especially formulated to support **penetrates, colonises and protects the turf root zone** roots of turf where they act as a living barrier to promote niche exclusion of other microbes. Establishment of Agrimm's unique strains of *Trichoderma* amongst turf roots minimises excessive build up of the thatch layer and assists healthy root growth.

*Enhanced root growth after turf establishment with Trichoprotection*

Agrimm Technologies is proud to announce this new Trichoflow Turf Plus formulation containing safe, easy to use, biological active ingredients for sports turf. This exciting new formulation is the result of continuing laboratory and field research conducted on turf grass in New Zealand and Australia. This research has produced a more effective formulation for use by turf professionals as an integrated management tool and offers real potential for reduced chemical use.

This new formulation contains increased activity of the biological active ingredient to ensure the very best microbial environment for your turf. It also contains new strains of the beneficial bio-active ingredient with clearly defined activity in turf, improving the health and turf quality of playing surfaces. These especially identified proprietary strains have been shown to be effective in establishing in the root zone under the range of conditions experienced with turf grass management in Australia and New Zealand.

Marketed internationally under the Trichoprotection® brand, this quality mark offers professional turf managers unparalleled quality and performance.

## Instructions

Apply Trichoflow Turf Plus at a minimum of 1.5kg per hectare. Premix Trichoflow Turf Plus with 15-20 litres of clean water. Add this pre-mixed suspension to the spray tank and dilute to the required rate. Apply at a minimum rate of 500 litres of diluted spray mix per hectare with a boom sprayer. Follow immediately with a light irrigation. If a smaller volume of spray mix is required, make up on a pro rata basis of 200 grams of Trichoflow Turf Plus per 75 litres of clean water.

At the beginning of the season apply at double rates.

## Comments

Mix well and ensure constant agitation during application. Apply with a suitable wetting agent for sports turf.

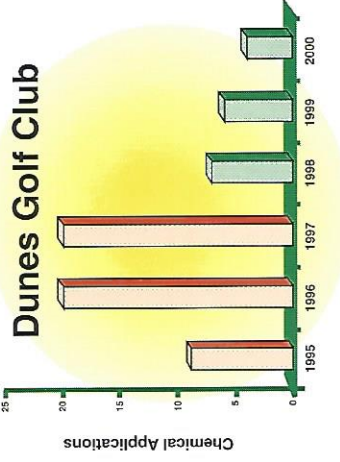

Ensure the spray tank is washed clean and free of chemical residue.

Trichoflow Turf Plus may be applied with all standard water-soluble fertilisers and organic based formulations.

After application it is recommended that light irrigation be applied.

*Unhealthy patches on untreated half of green (top image) compared with healthy turf on treated half of green (bottom image)*

*60% reduction in chemical use at the Dunes G.C. Victoria, since starting a Trichoprotection programme (1998)*
