

KEYSTONE 2

Turf Perennial Ryegrass

ANTEP Trialed Variety

7

Density	Wear Tolerance	Colour	Disease Resistance
			excellent

- Top Rating for Density
- Outstanding Wear Tolerance Rating
- High Seedling Vigour Rating

KEYSTONE 2 was one of the top varieties in the 2007 ANTEP Perennial Ryegrass trials. The most significant improvements of Keystone 2 over the original Keystone are its increased density, summer performance and disease resistance. KEYSTONE 2 also has one of the finest leaf textures of any perennial ryegrass variety, leading to enhanced density.

KEYSTONE 2 does well under fairway and sportsfield management. An excellent resistance to Crown Rust and cool season Brown Patch reduces the need for fungicide applications. Early spring green-up means denser turf earlier in the year, which can be an important advantage for sportsfields and golf courses.
