## SOUTHERN GOLD FINE RYEGRASS

Southern Gold is well suited to the cool season turfgrass growing areas of Australia and can be used for high quality oversowing of dormant warm season grasses in both Northern & Southern Australia.

Southern Gold can be used on Sportsfields, Golf Course Fairways, Home Lawns and turf areas where a fine textured, wear tolerant dense turf is required.

Adequate seed bed preparation is important in new turfgrass establishment. Apply a Starter Fertilizer prior to seeding and adjust the pH is necessary. Cool season grasses germinate best in the 18-25° degree range. Frequent light watering is required for optimum germination.

Southern Gold responds well to moderate levels of Nitrogen and a complete NPK fertilizer should be applied after 6-8 weeks.

A mowing height of 40-50mm is recommended.

**New Sowing: 3-4kg per 100 sq.m**

**Oversowing @ 50% cover: 2-3kg per 100 sq.m**

*The high quality of Southern Gold is evident @ Melbourne Grammar*
